## 1.0 Introduction

---

ADW Johnson (ADWJ) has been commissioned by Sell and Parker Pty Limited to carry out a Stormwater Management Assessment of the approved metal recycling facility located at 23-45 Tattersall Road, Kings Park.

The site was approved for a site and processing capacity expansion by the Department of Planning and Environment, Application Number State Significant Development (SSD) 5041 dated 12<sup>th</sup> November 2016.

The licence that has been granted by the EPA does not allow for any overflows from the site being discharged to Breakfast Creek. This is contrary to the initial report submitted with the proposal (undertaken by Environmental Resource Management) that allowed for some discharge from the site. Due to this, an updated assessment was required to comply with this licencing condition.

The overall aim of the assessment is to demonstrate that the expanded site is capable of retaining water onsite, and safely and effectively discharging to the Sydney Water sewer.

Through undertaking the works described in the following report, the recycling facility will be able to operate in its expanded form as approved by the Development Consent 1:100 year 72 hour design criteria and in accordance with the EPA License requirement that does not permit discharge to waters.

## 2.0 Site Description

### 2.1 PROJECT BACKGROUND AND LOCATION

The Sell and Parker Kings Park recycling facility is located at 23-45 Tattersall Road, Kings Park. This facility was approved for a site and processing capacity expansion by the Department of Planning and Environment, Application Number State Significant Development (SSD) 5041 dated 12<sup>th</sup> November 2016.

The site consists of the existing recycling facility on 45 Tattersall Road and the expansion onto 23-43 Tattersall Road. The approved site layout is included in Appendix 1.

The Sell and Parker metal recycling facility, is located in the Kings Park Industrial zone within the Blacktown City Council (BCC) area at 23-45 Tattersall Road, Kings Park, which is shown in Figure 1.

Note: Background image sourced from LPI's online mapping system – SIX Viewer.

**Figure 1 - Existing Site**

## 3.0 Project Objectives

---

ADW Johnson has been commissioned by Sell and Parker Pty Limited to carry out a Stormwater Management Assessment of the approved development. The assessment involves modelling the proposed stormwater flows from the site and establishing the design storm Average Recurrence Interval (ARI) that is required to be contained onsite to operate effectively.

The Environment Resource Management (ERM) concept stormwater plan that was submitted as part of the development approval process included a discharge to Breakfast Creek. The Environmental Protection Licence (EPL) that was granted after the development approval does not include a discharge point to Breakfast Creek. This report provides a proposed design that does not include a creek discharge. The report provides a design that proposes discharge to Sydney Water sewer.

The key activities include:

- Review the concept retention design proposed by the ERM Stormwater Management Plan (June 2015 and September 2015);
- Confirm the volume capacity required to be retained in a 1:100 year 72 hour rainfall event;
- Develop an operational design to manage a 1:100 year 72 hour rainfall event (the ARI); and
- Develop a water treatment system design that will meet Sydney Water sewer discharge requirements and EPL requirements;

## 4.0 Stormwater Strategy

---

The design is based on achieving a site capacity holding of 9,570m<sup>3</sup> (described in further detail within this report) of rainfall based on the 1:100 year, 72 hour rainfall event with proposed controlled discharges to sewer and no uncontrolled discharges. This site holding capacity requirement is detailed in the reports approved by the Department of Planning in Approved Consent SSD 5041 12<sup>th</sup> November 2015.

The design proposes the continued use of the existing retention basin, the upgrade of the existing primary treatment system and the addition of secondary and tertiary water treatment systems. The shortfall in retention capacity will be addressed through the installation of above ground tank/s. A controlled release point from the tank/s will discharge to Sydney Water sewer.

The tank/s will receive tertiary treated water for use in the shredder and around the site for dust suppression during dry periods. Excess water discharge to make capacity for anticipated rainfall events will be via a Sydney Water licenced sewer discharge.

The assessment has been based on:

- Site survey;
- Architects layout;
- ERM Stormwater Management Plan June 2015;
- ERM Stormwater Management Concept Plan September 2015;
- Aurecon Stormwater Management Report March 2016;
- EPA Comments on Water Management Plan dated 22<sup>nd</sup> September 2016 and 9<sup>th</sup> February 2017; and
- The design principle of the Water Treatment System (WTS) as detailed in the below diagram and Appendix 2.

The Aurecon Stormwater Management Report dated March 2016 has been attached as Appendix 6. This report draws on some of the information in the Aurecon Report, however it should be noted that the Aurecon Report is superseded by this report as discharge to Breakfast Creek is no longer being requested and therefore the previous design proposed is no longer relevant.

The following diagram shows the process that has been proposed by Sell and Parker to meet the licencing requirements set by the EPA. Through the process of modelling, both design storms up to and including the 100 year ARI event as well as undertaking a water balance for a period of nearly 100 years utilising existing rainfall data, ADW Johnson have been able to verify the proposed system has adequate capacity to perform as required.

The design of this proposed Water Treatment System is detailed with current information and approvals. The final construction of the Water Treatment System and the exact position of the pipes and pumps may be finessed due to Sydney Water requirements and existing ground conditions.

## Proposed Water Treatment System Design

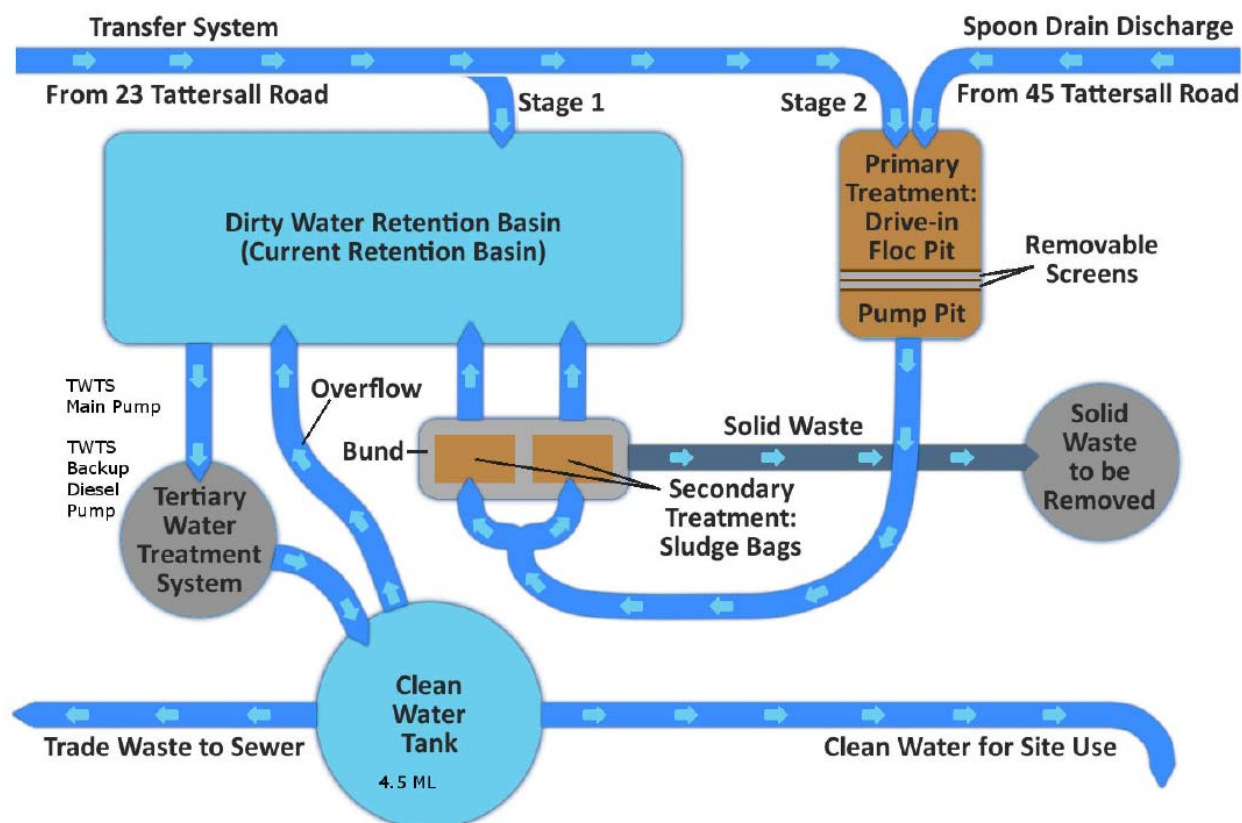

Figure 2 - Proposed Water Treatment Design

### 4.1 PRIMARY TREATMENT SYSTEM – FLOC PIT

Flows generated from 45 Tattersall Road flow by defined overland flow paths directed into the existing floc pit and the coarse gross pollutants will be extracted ready for collection. Floating materials are proposed to be removed manually. The transfer pump operates from this pit.

The upgrade will involve the modification of the existing floc pit and road into a drive through two (2) part system that allows coarse gross pollutants to fall out in the first section and floating materials to be removed via replaceable screens. A hydrocarbon boom will be utilised as required. Water passing through the screens will go into the floc pump pit ready for transfer to the secondary treatment system.

The location of the Floc Pit is detailed on the Drainage Plan and will be constructed of reinforced concrete.

The dirty water transfer on 23 Tattersall Road is addressed in Section 4.6. These dirty water flows will be pumped into the retention basin by a traditional pit and pipe network.

### 4.2 SECONDARY TREATMENT SYSTEM – SLUDGE BAGS

Water is pumped from the Primary Treatment System (pump pit) to the Secondary Treatment System which consists of two (2) sludge bags in a bunded area on the retention basin wall.

The bags will retain the majority of the sediment while filtered water will seep out into the bund and then gravity feed down a discharge pipe into the retention basin.

The design of the bund will be a reinforced concrete constructed 15m x 5m bund with a 30cm gutter to incorporate two (2) 6m x 4m sludge bags. This has been detailed on the Drainage Plan.

While it is not anticipated that it will be required, the transfer system from the primary to the secondary treatment systems will allow for the installation of a flocculation injection point. A flocculation system can be installed, if required, to improve fine sediment capture.

Sludge removal takes place as required. Photos of sludge bag dewatering systems are in Appendix 3.

### **4.3 EXISTING ONSITE DETENTION BASIN**

The site retention design will utilise the existing 32m x 90m detention basin. Under this proposal, there are no changes proposed to this existing detention basin capacity. The landowner has informed us that the basin is clay lined and expansion of the basin is not possible due to encroachment on the existing 750 diameter Sydney Water sewer main that is over 4m deep. The location of this sewer main can be seen in Appendix 5.

Treated water will then be pumped from the retention basin into the Tertiary Treatment System.

### **4.4 TERTIARY WATER TREATMENT SYSTEM**

The Tertiary Water Treatment System (TWTS) will remove fine suspended particulate material. This system will be utilised to provide a water quality that meets the requirements for Sydney Water sewer discharge. Given the large size of the proposed tanks and comparatively low water usage for site requirements, the TWTS is anticipated to be utilised once per fortnight in normal operation. It will be utilised as required before anticipated large rainfall events and during heavy rains to maximise available storage capacity and maximise discharge to sewer.

### **4.5 TANKS**

Tertiary treated water will be stored in tank/s. The water will be utilised for site reuse and discharged to trade waste if and when required. In the event of a transfer failure or if required to improve retention basin water quality, overflow from the tank/s will be transferred back to the retention basin. The proposed tank size capacity is included in Section 6.5 of this report.

### **4.6 TRANSFER SYSTEM**

The dirty water transfer system from 23 Tattersall Road will initially pump directly into the retention basin via a traditional pit and pipe network. Once the retention basin treatment systems have been installed, the transfer system will be redirected to the primary water treatment pit. Details of this proposal can be seen in Appendix 5.

## 5.0 Catchment Areas and Site Drainage System

### 5.1 DRAINAGE CATCHMENT AREAS

45 Tattersall Road produces dirty surface water. This water is directed to the retention basin. Some buildings exist on site that direct flows generated from the roof towards the existing stormwater network. These are shown in the site layout in Appendix 1.

23-43 Tattersall Road operations contain both clean and dirty water zones. The clean and dirty water areas are detailed in the dirty water Catchment Areas Plan in Appendix 4.

The dirty water areas are where operations take place that have the potential to result in impacted water. The clean water areas comprise roofed areas, car parks, driveways and landscaped areas and flows generated are discharged to the existing drainage network located on the site.

### 5.2 EXISTING AND PROPOSED DRAINAGE

The drainage plans for the site are for:

- 45 Tattersall Road – existing drainage detailed in Appendix 5; and
- 23-43 Tattersall Road – proposed drainage currently under construction, plans for these works are located within Appendix 5.

Flows from 45 Tattersall Road make their way through defined overland flow paths to the existing raised “turkey nest style” retention basin. Through a combination of site inspection, as well as desktop analysis of available plans showing existing site contours and drainage infrastructure, it has been determined that during all storm events up to and including the 100 year ARI that no surface flows will be able to bypass the existing retention basin to Breakfast Creek.

Drainage works within 23-45 Tattersall Road are being undertaken to ensure that all flows considered “dirty” water are contained, retained and pumped through to the existing detention basin. Further details of this system can be seen in Appendix 5.

## 6.0 Hydraulic Modelling

This section addresses the required design capacity for the site, the current site holding capacity and provides modelling to demonstrate how the provision of tank(s) will meet the ARI design capacity.

### 6.1 SITE DESIGN CAPACITY

The site design capacity was set in the reports approved by the Department of Planning in Approved Consent SSD 5041 12<sup>th</sup> November 2015.

The design capacity was calculated utilising DRAINS. DRAINS uses the time-area method to estimate runoff hydrographs for pervious and impervious surfaces. The Rainfall Intensity Frequency Duration (IFD) data used in the model was sourced from the Bureau of Meteorology in accordance with Chapter 2 (Volume 1) of AR&R (1998). The DRAINS model was configured for the defined catchment to determine the peak levels in the basin and hence required storage capacity for different rainfall durations, up to 72 hours for the 5, 10, 20, 50 and 100 year Average Recurrence Interval (ARI).

The DRAINS model utilised a total catchment area of 3.25Ha with an impervious fraction of 100%.

Based on the design philosophy the critical capacity for the site is the 1:100 year 72 hour which has been determined to require a storage capacity of 9,570m<sup>3</sup>.

### 6.2 CURRENT SITE HOLDING CAPACITY

The current holding capacity of the site is:

Table 6.1 – Current Site Holding Capacity

Location	Storage	Reference
Retention basin	4,274m <sup>3</sup>	Lean Lackenby Hayward document Appendix 7
45 Tattersall Road Site	1,027m <sup>3</sup>	Lean Lackenby Hayward document Appendix 7
23-43 Tattersall Road Site	950m <sup>3</sup>	ADWJ Plan Appendix 8
<b>Total</b>	<b>6,251m<sup>3</sup></b>	
<b>Theoretical shortfall</b>	<b>3,319m<sup>3</sup></b>	Storage Capacity (9,570m <sup>3</sup> ) – Site Capacity (6,251m <sup>3</sup> )

Note: The retention basin and 45 Tattersall road holding capacity figures from previous versions of this Assessment have been revised and are now based on detailed survey volume calculations as shown in Appendix 7.

This theoretical shortfall does not take into consideration the site operational usage requirements of 1,000-1,500m<sup>3</sup> per month which translates into an operational holding capacity of 1,000m<sup>3</sup>, stored within the existing detention basin on site. The 1,000 - 1500m<sup>3</sup> per month requirement for operational uses is very conservative. The DA approved ERM Stormwater June 2015 report included an operational use of 2,400m<sup>3</sup> per month.

Please note, the storage capacity on 45 Tattersall Road that has been utilised has very conservatively been set at RL 41.0. There is the capacity for greater storage on this site.

### 6.3 PROPOSED DESIGN CAPACITY OF SITE

The required capacity of the site is 9,570m<sup>3</sup>. The current capacity of the site is 6,251m<sup>3</sup>. In order to make up the shortfall as discussed in the Water Treatment Design, holding tank(s) are proposed. Please see Appendix 9 for the proposed location.

Table 6.2 – Proposed Site Holding Capacity

	Required	Proposed
Holding Capacity	9,570m <sup>3</sup>	
45 Tattersall Road Site storage capacity		1,027m <sup>3</sup>
23-43 Tattersall Road Site storage capacity		950m <sup>3</sup>
Retention Basin Capacity		4,274m <sup>3</sup>
<i>Proposed Tank Option</i>		<i>4,500m<sup>3</sup></i>
<b>Total</b>	<b>9,570m<sup>3</sup></b>	<b>10,751m<sup>3</sup></b>

Therefore, the facility will have a capacity of 10,751m<sup>3</sup> versus a requirement of 9,570m<sup>3</sup> resulting in an excess of 1,181m<sup>3</sup>

In the event of high rainfall events, should the hard stand rear yard holding capacity areas be required then rain falling on 45 Tattersall Road will pond in the rear yard north of the retention basin (this is detailed on the Catchment Area plan). The rain on this site will fall in a dirty water area and drain to the water treatment system.

The whole site on 45 Tattersall Road has been classified as a dirty water catchment and due to this there is no stormwater discharge point from this site to Breakfast Creek.

Within the 23 -43 Tattersall Road area, the rear car park can be classified a clean water catchment zone.

The rain falling in the rear car park will be considered clean water and will fall into a clean water catchment area. As such, it will drain through the existing stormwater system to Breakfast Creek.

Only clean water from the clean water catchment area will discharge via the existing stormwater system.

### 6.4 WATER BALANCE ON DESIGN MODEL UTILISING EXISTING RAINFALL DATA

Major storm events come with forewarning which means that discharge can commence prior to the event. The sewer discharge maximum modelled rate utilised is 10L/s.

In the event of a 1:100 year 72 hour rain fall event, a conservative approach estimates that water can be discharged approximately one (1) day before the event (due to BOM notifications). Utilising the maximum pump rate of 10L/s for 24 hours allows an additional 864m<sup>3</sup> of storage.

Estimation of Surplus Capacity due to discharge capacity:

Table 6.3 – Required v Proposed Capacity

	Required	Proposed
Holding Capacity	9,570m <sup>3</sup>	
45 Tattersall Road Site storage capacity		1,027m <sup>3</sup>
23-43 Tattersall Road Site storage capacity		950m <sup>3</sup>
Retention Basin Capacity		4,274m <sup>3</sup>
<i>Proposed Tank Option</i>		4,500m <sup>3</sup>
1 day of sewer discharge 864m <sup>3</sup>		864m <sup>3</sup>
<b>Total</b>	<b>9,570m<sup>3</sup></b>	<b>11,615m<sup>3</sup></b>

Therefore there will actually be a surplus capacity of 2,045m<sup>3</sup> in the event of a 1:100 year 72 hour rainfall event.

These figures remain conservative as it does not include;

- Excess capacity in the dirty water transfer pit;
- Excess capacity in the floc pit;
- Additional capacity to discharge to sewer as storm events generally have several days of warning before they occur;
- Greater storage than RL 41.00 in the 45 Tattersall Road holding capacity area.

The TWTS pump has been sized at 2000m<sup>3</sup> per day to allow additional transfer capacity. It is currently proposed that 1,600m<sup>3</sup> goes to the tank and 400m<sup>3</sup> goes to the trade waste per day. This will reduce the likelihood for the retention basin reaching capacity in smaller events. A suitable diesel pump will also be included as a contingency to address the risk of pump failure.

The measures that will be implemented to ensure that as much as practicable, capacity is maintained to capture rainfall up to the design storm include:

- Discharge to trade waste;
- Additional transfer capacity of the Tertiary Treatment Water System Pump;
- Use of water for operational requirements;
- Use of excess capacity in retention basin, water tanks, dirty water transfer pit (buffer tank) and transfer pit pipes; and
- As previously raised in the this report, the capacity figures do not include the excess capacity in the dirty water transfer pit and pipes, floc pit and additional capacity to pre-discharge to sewer with several days of storm warning.

Under this scenario, the system can have a normal operational capacity of 1,000m<sup>3</sup> of water. A daily time step site capacity model has been developed which models the interaction of successive rainfall events with water reuse and disposal constraints including pump flow rates to demonstrate the effectiveness of the water management system.

Rainfall data was adopted for Sydney Observatory Hill (BOM) for the period of 1913 to 2010 to provide a significant period of analysis. Modelling of the water balance has been undertaken on a daily time step as requested by the EPA. The analysis is able to show the interaction of successive rainfall events with water re-use and disposal constraints. Disposal during large storm events to the Sydney Water sewer was set at a maximum flow rate of 10L/s. The daily time step seen in Figure 3 illustrates:

- The maximum site capacity is not exceeded from 1913-2010
- The maximum storage capacity utilised was 9,445 m<sup>3</sup> in August 1986. This is below the capacity of 11,615 m<sup>3</sup>, this is below the capacity of 11,615m<sup>3</sup>
- All discharge offsite can be managed via discharge to the Sydney Water sewer and not to Breakfast Creek

Refer Appendix 10 for details of other storm events.

The water balance can be simplified as:

$$V = E + S - D$$

V - Volume of water detained on site

E - Existing volume of retention from previous days modelling

S - Surface runoff generated from all "dirty water" areas (100% Impervious

D - Discharge to Sydney Water Sewer @ 10L/s

The value of S was determined utilising the program MUSIC (Model for Stormwater Improvement Conceptualisation). The algorithm adopted to generate urban runoff within MUSIC is based on a simplified rainfall-runoff model developed by Chiew et al. (1997). The model was initially developed using a daily time-step, but has been modified for incorporation into music to allow disaggregation of the generated daily runoff into sub-daily temporal patterns.

## Sell and Parker Water Balance, Daily Timestep

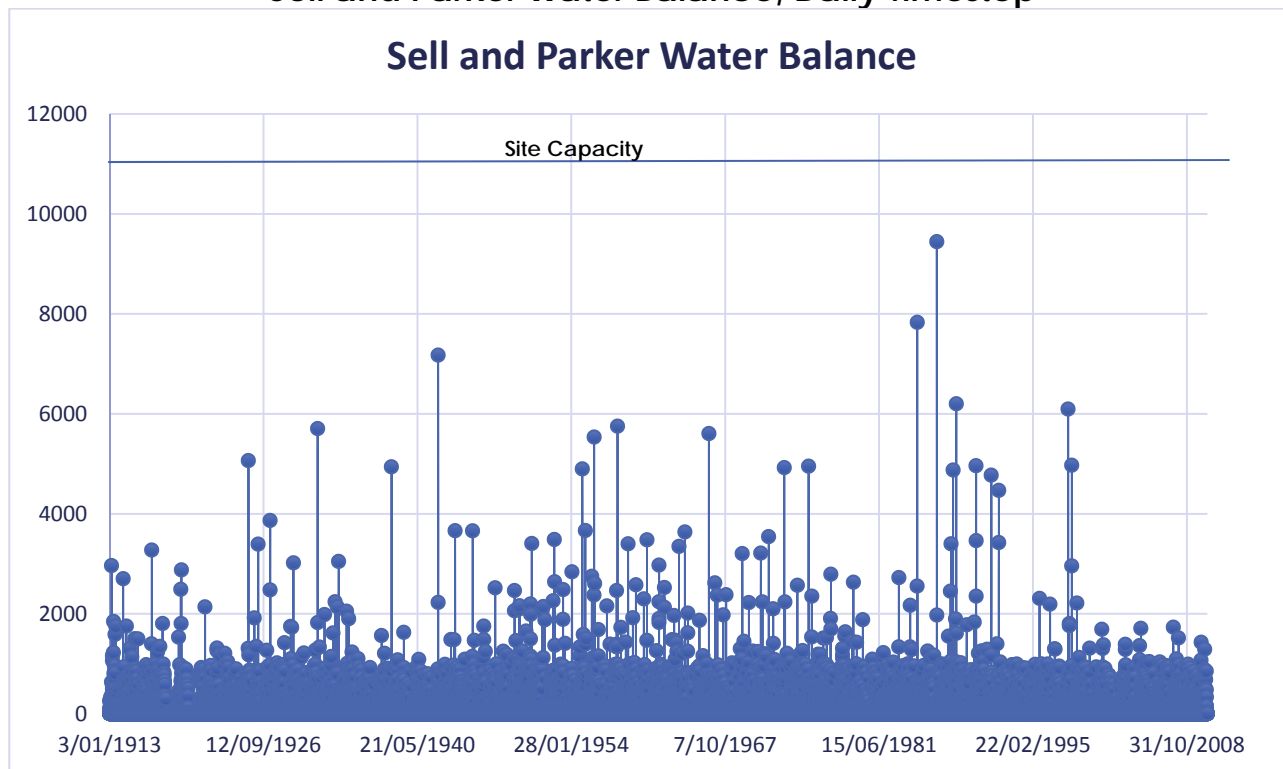

Figure 3 – Water Balance Analysis of Proposed System 1913-2010, Daily Time Step

### 6.5 PROPOSED TANK SIZE

Discussions with Sell and Parker have indicated they are seeking to install two (2) tanks of 2,270m<sup>3</sup>, totalling 4540m<sup>3</sup>, which will ensure the site capacity in a 1:100 year 72 hour rainfall event is met. The location of the proposed tank is indicated on the site plan along with a proposed sewer connection into an existing sewer line. The proposed tanks dimensions are 10.7m high with a nominal dimension of 16.5m, a typical section of the tank is shown below.

Figure 4 – Typical Section – Proposed Holding Tank

## 6.6 CONTROLLED DISCHARGE TO SEWER

Testing of TWTS designs are in their final stages. Application for a trade waste license has been granted as an in principle approval by Sydney Water. In principle approval is attached at Appendix 11.

The trade waste discharge will be via a proprietary flow control device from the clean water tank/s to the sewer discharge point. It is proposed to include a visual air gap backflow prevention connection from pipe discharge to the Sydney Water sewer connection.

The system will include a float valve that will automatically discharge flows to trade waste when the tanks begin to fill.

The proprietary flow control device will limit flow to a maximum of 10L/s. This is detailed on the site drainage plan.

A shut off valve will be installed at the discharge point to all for discharge to be ceased if required.

Should there be an event where the discharge criteria is not met and the discharge of waste water to sewer is prevented by the activation of the shut off valve, the contingency protocol for the disposal of waste water will be:

- The shut off valve will have been activated;
- The water is returned to the retention basin and sent back through the WTS again for treatment;
- If the re-treated water meets the discharge criteria, it will be discharged to trade waste or utilised for onsite processing requirements;
- If the re-treated water does not meet the discharge criteria it will be removed via an appropriately licenced contractor for disposal at an appropriately licenced liquid waste facility.

Discharge to sewer will be utilised to:

- Manage the retention basin water levels;
- Manage the tank levels; and
- Manage site capacity to address a 1:100 year 72 hour rain fall event.

## 6.7 RESTORING CAPACITY TO THE WTS FOLLOWING A STORM EVENT

The proposed water treatment system will operate, allowing discharge to Sydney Water sewer until such time that the required site holding capacity of 1,000m<sup>3</sup> is reached.

Following a significant storm event, it is proposed that the Water Treatment System (WTS) is inspected for any visual damage, blockage or foreign objects. Any large foreign objects within the basin or treatment system should be removed and disposed of appropriately.

All proprietary devices should be maintained in accordance with their manufactures guidelines, including replacement of sludge bags as required to ensure that any major storm events occurring in the future will be effectively contained as designed.

## 7.0 Conclusion

---

ADW Johnson have been commissioned by Sell and Parker Pty Limited to carry out a Stormwater Management Assessment of the proposed expanded metal recycling facility located at 23-45 Tattersall Road, Kings Park.

The licence that has been granted by the EPA does not allow for any overflows from the site being discharged to Breakfast Creek. This is contrary to the initial report submitted with the proposal (undertaken by Environmental Resource Management) that allowed for some discharge from the site. Due to this, an updated assessment was required to comply with this licencing condition.

The updated proposal was required to calculate the stormwater storage volume required to be stored on site and discharged to Sydney Water sewer at a maximum rate of 10L/s. Based on the design philosophy adopted, the critical capacity for the site is the 1:100 year 72 hour which has been determined to require a storage capacity of 9,570m<sup>3</sup>.

The design proposes the continued use of the existing retention basin, the upgrade of the existing primary treatment system and the addition of secondary and tertiary water treatment systems. The shortfall in retention capacity will be addressed through the installation of above ground tank/s. A controlled release point from the tank/s will discharge to Sydney Water sewer.

The tank/s will receive tertiary treated water for use in the shredder and around the site for dust suppression during dry periods. Excess water discharge to make capacity for anticipated rainfall events will be via a Sydney Water licenced sewer discharge.

The assessment was able to prove that the expanded site is capable of retaining water onsite, and safely and effectively discharging to the Sydney Water sewer. Through undertaking the works described in the following report, the recycling facility will be able to operate in its expanded form as approved by the Development Consent 1:100 year 72 hour design criteria and in accordance with the EPA License requirement that does not permit discharge to waters.

## 8.0 Qualifications of Authors

---

### Mark Kelly – ADW Johnson

#### *Qualifications*

Mark holds an honours degree in Civil Engineering from the University of Sydney, a Master's degree in Engineering Science, has chartered membership to Engineers Australia and has been accepted on the National Professional Engineers Register.

#### *Summary of Experience*

Mark is a chartered civil engineer with over fifteen years of experience in NSW and the ACT. As a civil engineer and project manager, Mark oversees the civil design and construction for land subdivision, water and civil infrastructure projects.

Moreover, Mark has extensive experience in services master planning, project feasibility, road design, hydraulic reticulation, water sensitive urban design, and urban development.

Mark is the Engineering Department Head at ADW Johnson.

#### *Selected Projects:*

- "Altrove" Schofields. Stormwater management planning for a future residential estate and town centre. This project included the design of major culvert crossings, two water quality (bio filtration) and detention basins that could be scaled to support stormwater treatment as the catchment is developed over 9 stages.
- Googong Township. Stormwater management planning for a master planned community of over 5,000 lots. Included detention design, water quality, non-potable irrigation and sewer treatment plant water balance.
- Trinity Point Marina. Stormwater management planning for a commercial and residential precinct. Included detailed water monitoring regime to protect a high value sea grass community, water balance and bio filtration treatment devices.
- North Weston Ponds. Design of regional water quality ponds with a combined surface area of over 11 Ha. Included a spillway design that caters over 110 cubic metres per second.

## Mark Littlefield – ADW Johnson

### *Qualifications*

Bachelor of Civil and Environmental Engineering (Hons), Diploma of Engineering Practice, University of Technology Sydney (2009).

### *Summary of Experience*

Mark commenced work at ADWJ in 2007 whilst completing his Bachelor of Engineering degree at the University of Technology Sydney. He completed his degree in 2009 at which time he commenced full time work as a graduate Civil/ Environmental Engineer gaining experience on a wide range of projects on the Central Coast, Hunter, Newcastle, and Sydney.

With nearly 8 years' full time experience as a qualified engineer Mark has significant experience in stormwater and wastewater management including developing solutions for stormwater detention, water quality and water balance analysis.

### *Selected Projects*

- 'Gurawarang Waters', Macleay Drive, Halekulani - Wetland mitigation measures were designed utilising a water balance analysis to maintain the drying hydrology of Colongra Wetland, a SEPP14 wetland located downstream of the site. Modelling determined that the selected pump and rising main, additional to the water reuse proposed for the site achieved the objectives in accordance with "Water Sensitive Urban Design Solutions for Catchments above Wetlands - Appendix B: Catchment Hydrologic Indices and Urban Water Management Performance Objectives" dated May 2007, prepared by Hunter and Central Coast Regional Environmental Management Strategy (HCCREMS) analysis methods.
- Wadalba East Landowners Group (WELOG), Jensen Road, Wadalba – Preparation of a stormwater strategy for rezoning of approximately 1,500 residential lots that assessed of the potential impacts on water quality, quantity, downstream SEPP 14 wetlands and assessment of flooding for local overland flows and accessibility during flood events. The methodology employed was to treat all stormwater within the limits of the development through a combination of rainwater tanks, swales, gross pollutant traps and constructed wetlands in order to maintain receiving waters in their current state. Channel flood water levels as well as detention basins were determined in order to assess the impact of stormwater associated with any future residential development of the WELOG site.
- Proposed 300 Lot Residential Subdivision - 79 Berkeley Road, Berkeley Vale - The Water Cycle Management Plan was prepared in accordance with Wyong Shire Council's Development Control Plan (DCP) 2013 and satisfied the requirements in relation to existing hydrology, total water cycle management, erosion and sediment control, on site detention and water quality. Furthermore, the assessment and reporting had to consider Wyong Shire Councils DCP 2013 Chapter 3.10 Wetlands Management. Water balance analysis was required to be undertaken to model infiltration measures adopted to ensure any impacts on the wetland were avoided.

# 1 Introduction

## 1.1 Project background

Sell & Parker Pty Ltd manages a Waste Metal Recovery, Processing and Recycling Facility located at 45, Tattersall Road, in Kings Park (Lot 5 / DP 7086)

They are planning to annex to their facility adjoining lot, 23-43 Tattersall Road (Lot 2 / DP550 522). This entails a 217% increase of the facility area.

A Development Application has been submitted with this purpose, which due to the nature of the business is being processed as a State Significant Development. The proposed development is located within Blacktown City Council local government area.

Figure 1-1 Locality plan

## 1.2 Purpose of Report

Aurecon Australasia Pty Ltd has been commissioned by Sell & Parker Pty Ltd to carry out a hydraulic assessment of the detention basin intended to serve the proposed development. The assessment involves modelling the proposed stormwater flows from the site and establishing the design storm ARI at which uncontrolled discharge occurs.

This report will provide sufficient information in response to the EPA's requirement to identify the circumstances under which uncontrolled (i.e. untreated) discharge could occur.

The key activities include;

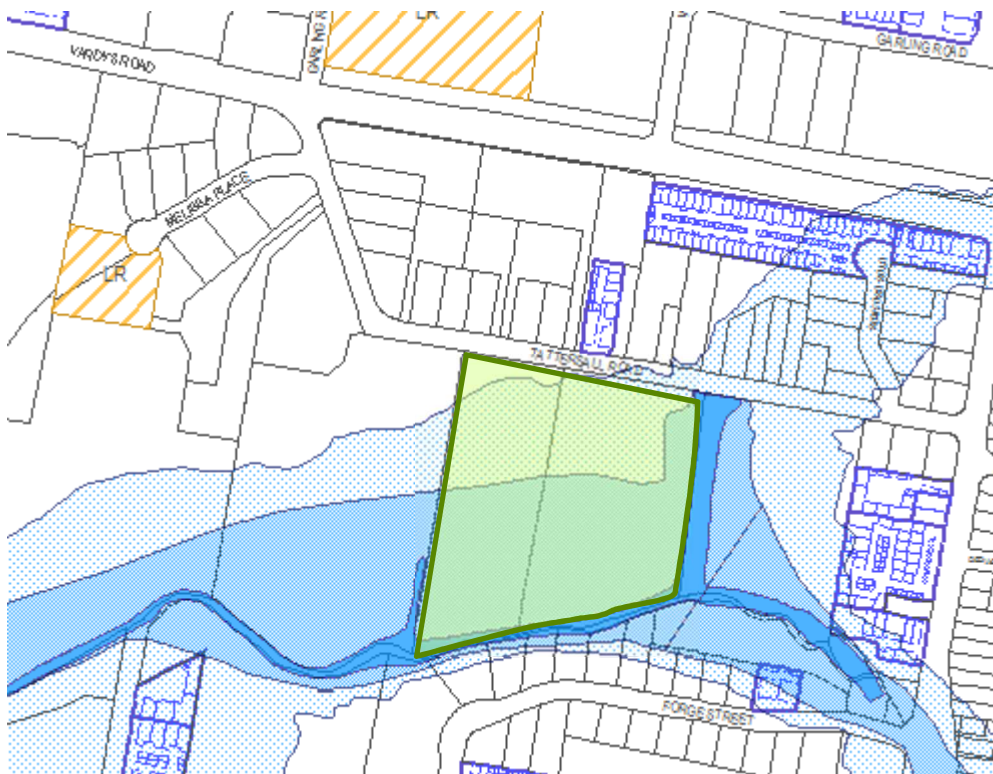

- Review the concept retention design proposed in the stormwater management plan
- Develop a DRAINS model of the concept retention basin to:
- Determine the retention volume required above normal pump operation requirements to achieve no uncontrolled discharge for extreme events up to a 100 year ARI design storm event for standard storm durations up to the 72 hour duration.

Considerations will be given to site constraints, practicable tertiary treatment rate (based upon those provided within the SWMP), size of basin, site requirement for process water.

## 1.3 Local flood assessment

An assessment of Blacktown Council's flood maps indicate that the site is Low/Medium Flood risk Precinct.

Refer to Blacktown City Council – Flooding Precincts map below (extract from BCC MapsOnline).

# 2 Hydraulic Assessment of the Retention Basin Performance

## 2.1 Proposed Design

The design proposes the construction of a concrete basin to retain stormwater prior to the tertiary treatment. Once treated, stormwater is directed to the adjoining Creek (Breakfast Creek).

The assessment has been based upon the following information:

- Email from Sell & Parker dated 5 January 2016
- Meeting with ERM on 15th January 2016
- Architects Layout received 15 March 2016
- Digital topographical survey received 18 March 2016
- Stormwater Management Plan dated June 2015 prepared by ERM
- Letter from EPA (comments on SWMP) dated 28 July 2015
- Stormwater Management Concept Plan dated September 2015 prepared by ERM
- Drawing No. 0313447s\_SMPC\_C001\_R0.cdr
- Drawing No0313442s\_SMCP\_C002\_R0.cdr.

The capacity of this retention basin must be such that no untreated stormwater from the operational areas reaches the channel for recurrence intervals of up to 100 year ARI.

Key elements on the functioning of the system are:

### 2.1.1 On site detention tank

The proposed on site retention design consists on a 32x90m concrete basin. The base of the basin is designed to RL 37.5m (AHD). The outflow from the basin is to be carried out using a floating pump that directs the flow to the tertiary treatment (Hydroceptor).

An emergency overflow weir is to be provided at RL 40.3m AHD. All flows reaching the overflow will flow directly to the creek by-passing the tertiary treatment.

Appendix 1 shows the proposed design for the basin.

### 2.1.2 Pump – Tertiary treatment

Water from the basin is pumped to the tertiary treatment (Hydroceptor) located besides it. This pump is the only basin outflow, therefore the only possible outlet for the basin is the overflow to the channel mentioned in the basin description.

According to the proposed design, pump operation conditions are as follows;

Pump rate	Rate	Operation levels
Pump Optimum rate	6l/s	0.35 to 1m
Pump Maximum rate	24l/s	> 1m

Table 2-1 Pump rates

## 2.2 Hydraulic Modelling

A hydraulic assessment of the detention basin intended to serve the proposed development was undertaken to assess the performance of the proposed design and the effects of possible upgrades to it.

The DRAINS software package by Watercom was used to model the hydrological and hydraulic performance of the proposed OSD basin in this site. DRAINS is a 1-dimensional storm water drainage design and analysis tool developed for Australian practice.

The ILSAX hydrological model function was adopted for the project.

### 2.2.1 Catchment to basin definition

The contributing drainage area for the OSD was identified based upon plans provided by Sell & Parker Pty Ltd and confirmed during the site visit conducted on the 9th of March. Main findings in this respect are:

- All buildings are drained via gutters and downpipes directing the stormwater from the roofs to

rainwater tanks and/or to outfall structures which discharge to the existing stormwater system.

- North area of the lot to add (carpark and building surroundings) drains separately. (As noted within site visit and not updated on drawings, refer to catchment plan for details)
- Drainage for carpark located on the South is assumed independent as well. During detailed design, site grading will be defined to ensure that separation between carpark and operational catchments is guaranteed. Confirmation of the validity of this assumption from the EPA will be requested.

Resulting catchment area draining to the basin is shown in Appendix C.

## 2.2.2 Hydraulic parameters

The DRAINS modelling parameters adopted for this study are summarised in Table below

Parameter	Value
Total Catchment area (ha)	2,92
Percentage impervious (%)	100
Time of concentration (min)-	5

Table 2-2 DRAINS modelling parameters

## 2.2.3 Hydrology data

Rainfall intensities were obtained from the Bureau of Meteorology (BOM) using the 1987 Australia Rainfall and Runoff (AR&R87) design flood estimation. This data was used to undertake the hydrologic analysis. List of the Intensity Frequency Duration (IDF) data obtained from BOM is showed at the table below:

Duration	1 Year	2 years	5 years	10 years	20 years	50 years	100 years
5Mins	79.2	102	130	147	169	197	218
6Mins	74.1	95.3	122	138	158	185	205

72Hrs	1.56	2.05	2.80	3.26	3.84	4.63	4.9

Table 2-3 Design rainfall intensities

## 2.3 Model simulation

DRAINS model was configured for the defined catchment to determine the peak water levels on the basin for different rainfall durations, up to 72h duration, and for 5, 10, 20, 50 and 100 year Average Recurrence Interval (ARI)

The analyses showed that water levels on the basin will stay below the overflow for up to 50 years ARI, so 1 in 50 years events, but uncontrolled discharges are expected for 1 in 100 year storms for long duration events (36-72h duration):

Storm	Basin overflow peak flow		
	20y	50y	100y
AR&R 100 year, 5 minutes storm, average 218 mm/h, Zone 1	0	0	0
AR&R 100 year, 30 minutes storm, average 97.4 mm/h, Zone 1	0	0	0
AR&R 100 year, 1 hour storm, average 66.0 mm/h, Zone 1	0	0	0
AR&R 100 year, 2 hours storm, average 43.4 mm/h, Zone 1	0	0	0
AR&R 100 year, 3 hours storm, average 33.7 mm/h, Zone 1	0	0	0
AR&R 100 year, 6 hours storm, average 21.9 mm/h, Zone 1	0	0	0
AR&R 100 year, 12 hours storm, average 14.4 mm/h, Zone 1	0	0	0
AR&R 100 year, 24 hours storm, average 9.6 mm/h, Zone 1	0	0	0
AR&R 100 year, 36 hours storm, average 7.6 mm/h, Zone 1	0	0	0.041
AR&R 100 year, 48 hours storm, average 6.4 mm/h, Zone 1	0	0	0.071
AR&R 100 year, 72 hours storm, average 4.9 mm/h, Zone 1	0	0	0.137

Table 2-4 Basin overflow peak flows for different ARI and storm durations

Results show that provided the big capacity of the basin and the relatively low rates for the pump, long duration rainfall events generates the worst scenario for the system functioning.

These calculations have been undertaken considering the basin is empty at the time when the rainfall events start. This is therefore quite unlikely provided the high emptying time required for the proposed pumping rates:

Initial/final level	Outflow (l/s)	Emptying times
Overflow to H	24l/s	2.5days
H to L	6l/s	3.6days
	<b>Total:</b>	<b>6.1days</b>

Table 2-5 Emptying times for the proposed pump rates

# 3 Findings and Recommendations

An assessment of the possible options has been undertaken in order to quantify the magnitude of the required changes to the proposed design.

## 3.1 Options analysis

### 3.1.1 Pump capacity increment

As mentioned herein, proposed pump capacity is deemed insufficient to reduce expected water volumes in the basin during and after the rainfall events. In particular long duration rainfall events for high ARI.

#### 3.1.1.1 Pump working at maximum rate at any time

A first consideration has been done to the option of setting the system to have the pump working at the maximum rate from the initial low level in which it is activated.

This slightly reduces maximum water levels in the basin for 100y ARI, but the results show that the overflow level is still reached (as showed in appendix D) and consequently uncontrolled discharges are not avoided by implementing this measure.

Nevertheless, emptying time is significantly reduced to less than a half of the required time, as shown in Table 3-1.

#### 3.1.1.2 Addition of a second pump

Assuming that the pump rate is conditioned by the Hydroceptor, it is assumed that pump capacity increment can only be done by adding additional Hydroceptors.

In the case that a second Hydroceptor is provided flow rates will be doubled. Under this scenario, and considering that the basin is empty at the time when the rainfall starts, the system would work for 100y ARI, as water levels on the basin would not reach the overflow.

This result is based on the premise of having the carpark located on the South of the site excluded of the catchment area. If it needs to be considered as an operational area, the increase of the catchment area will cause the overflow to operate for the 100 year ARI, with 2 pumps operating at the proposed rates showed in Table 2-1.

Increasing the outflow from the basin with a second pump will also reduce emptying time between rainfall events, as shown in Table 3-1. This measure is considered necessary to ensure that the capacity of the basin is not reduced due to water volumes from previous storm events.

Initial/final level	1pump / Proposed rates		1pump / Maximum rate only		2pumps / Proposed rates		2pumps / Maximum rate only	
	rate (l/s)	Emptying time	rate (l/s)	Emptying time	rate (l/s)	Emptying time	Rate (l/s)	Emptying time
Overflow to H	24l/s	2.5days	24l/s	2.5days	48l/s	1.3days	48l/s	1.3days
H to L	6l/s	3.6days	24l/s	0.9days	12l/s	1.8days	48l/s	0.45days
	<b>Total:</b>	<b>6.1days</b>	<b>Total:</b>	<b>3.4days</b>	<b>Total:</b>	<b>3.1days</b>	<b>Total:</b>	<b>1.7days</b>

Table 3-1 Emptying times comparison for proposed/increased pump rates

### 3.1.2 Basin dimensions increment

A calculation has been undertaken to estimate required basin surface to ensure sufficient capacity to avoid water levels reaching the overflow for the initial scenario of one pump working at the designated rates.

Again, these calculations assume that the basin is initially empty for any storm and that the carpark located on the South of the site has an independent drainage.

Results show that a 510m<sup>2</sup> bigger basin would be required to prevent uncontrolled flows for 100y ARI storms:

Initially proposed dimensions		Required dimensions for 100y ARI	
90x32m	(2880m <sup>2</sup> )	90x37.7m	(3390m <sup>2</sup> )

Table 3-2 Required basin dimensions for 100y ARI

### 3.1.3 Increase the basin depth

Results show that required basin depth (level difference overflow-bottom) for a 2880m<sup>2</sup> basin area would be 3.35m, so 0.55m higher than the proposed design.

A basin depth increment can only be reached by lowering the basin base, as raising the overflow level would generate flood problems on the site.

## 3.2 Conclusions

Permutations of these measures should be considered during detailed design stage, in order to reach an optimal and feasible solution that prevents uncontrolled discharge for the 100y ARI events.

As mentioned, increasing pump rates is highly recommended. Emptying times are excessively large, which entails basin capacity reduction.

Proposed design shows low points on site, which lowers down the stormwater system and may contribute to upwelling. It is recommended that a site grading is conducted in the design phase.

**RAISING BASIN OVERFLOW**

To 40.85: (lots of upwellings) 2.8  
 No flow on weir 3.35

**BASIN EMPTYING TIMES**

<b>Time to empty from H to L:</b>	<b>Volume:</b> 1872
	Pump flow 6.0l/s (H to L)
<b>Time:</b>	87h <b>3.6days</b>

<b>Time to empty from Overflow to H:</b>	<b>Volume:</b> 5184
	Pump flow 24.0l/s (O to H)
<b>Time:</b>	60h <b>2.5days</b>

**TOTAL: 6.1days**

1 pump at max rate only (24/s):

<b>Time to empty from Overflow to L:</b>	<b>Volume:</b> 1872
	Pump flow: 24.0l/s (H to L) 24.0l/s (O to H)
<b>Time:</b>	82h <b>3.4days</b>

2 pumps, proposed rates:

<b>Time to empty from H to L:</b>	<b>Volume:</b> 1872
	Pump flow 12.0l/s (H to L)
<b>Time:</b>	43h <b>1.8days</b>

<b>Time to empty from Overflow to H:</b>	<b>Volume:</b> 5184
	Pump flow 48.0l/s (O to H)
<b>Time:</b>	30h <b>1.3days</b>

**TOTAL: 3.1days**

2 pumps, max rate:

<b>Time to empty from Overflow to L:</b>	<b>Volume:</b> 1872
	Pump flow: 48.0l/s (H to L) 48.0l/s (O to H)
<b>Time:</b>	41h <b>1.7days</b>

### Daily Time Step Site Capacity Modelling

#### Model Inputs

- Daily catchment runoff determined in MUSIC using rainfall data for Sydney Observatory Hill 1913-2010
- Managed overflow to Sydney Water Sewer modelled at a maximum flow rate of 10L/s
- Reuse modelled at 50L per day
- Additional capacity of 864m<sup>3</sup> pumped out of site storage for re-use before “major” storms, see Section 6.4

Storage volumes utilised on site during major storm events experienced from 1913-2010 are summarised on the following pages.

<b>Date</b>	<b>Maximum Storage Volume Used</b>
3/01/1913	257.8

## Appendix 11

---

Sydney Water trade Waste Approval

4 April 2017

Howard Richards  
Sell & Parker Pty Ltd  
45-55 Tattersall Rd  
KINGS PARK  
NSW 2148

Dear Howard,

**Re: 45-55 Tattersall Rd, Kings Park.**

**Application for consent to discharge industrial trade wastewater**

I am writing to advise that Sydney Water approves in principle to the discharge of contaminated surface water from this site. Formal approval is granted through the execution of an industrial trade waste consent, the granting of the consent is conditional on our inspection and approval of the proposed treatment plant.

If you require further information please contact John Zmijewski on 0419 273159.

Yours sincerely

**John Zmijewski**  
Business Customer Representative  
Developer and Business Customer Services

CICS0135 v1

**Application for Consent to Discharge Industrial Trade Wastewater**

PRINCIPAL BUSINESS ACTIVITY

Scrap Metal Processing

PROCESSES GENERATING TRADE WASTEWATER

1. Enclosed site water collection
- 2.
- 3.
- 4.

(IF SPACE INSUFFICIENT - PLEASE ATTACH SEPARATE LIST)

OFFICE USE ONLY

PROCESS DESCRIPTION	CODE

NOTE: A DESCRIPTION OF THE GENERAL NATURE OF THE BUSINESS, INCLUDING DETAILS OF THE WASTEWATER CHARACTERISTICS MUST BE COMPLETED ON "APPENDIX C" OF THIS FORM. (MORE INFORMATION CAN BE FOUND UNDER "APPENDIX C" IN THE INFORMATION PACKAGE).

1. Does the property currently discharge trade wastewater to the sewer?  YES

NO

EXPECTED COMMENCEMENT DATE OF DISCHARGE

April 2017  
MONTH YEAR

2. Does the property have MORE than one connection to the sewer?  NO

YES

HOW MANY? \_\_\_\_\_

NOTE: A SEPARATE APPLICATION SHOULD BE COMPLETED FOR EACH TRADE WASTEWATER CONNECTION TO SYDNEY WATER'S SEWER

3. IS ANY OF THE TRADE WASTEWATER TREATED PRIOR TO DISCHARGE TO THE SEWER?

NO

DETAILS OF PROPOSED PRE-TREATMENT FACILITIES MUST BE ATTACHED AS "APPENDIX D". (REFER TO "APPENDIX D" IN THE INFORMATION PACKAGE)

YES

DETAILS OF EXISTING PRE-TREATMENT FACILITIES MUST BE ATTACHED AS "APPENDIX D". (REFER TO "APPENDIX D" IN THE INFORMATION PACKAGE)

4. GREASE TRAPS will need to be cleaned by a Contractor registered with Sydney Water's Wastesafe system. The frequency of cleaning will be determined by Sydney Water. Please provide details:

GREASE TRAP CLEANING CONTRACTOR

CONTRACTORS WASTESAFE NO  
T

N/A

5. Will the trade wastewater finally (ie. AFTER pre-treatment) be pumped to the sewer?  NO

YES

PUMP MANUFACTURER'S SPECIFICATION/BROCHURE MUST BE ATTACHED AS "APPENDIX E". (REFER TO "APPENDIX E" IN THE INFORMATION PACKAGE)

6. Is a WATER meter fitted to the premises?  NO A WATER METER WILL HAVE TO BE FITTED

YES, SUPPLY YOUR BUSINESS ONLY

HOW MANY METERS? \_\_\_\_\_

YES, SUPPLY BUSINESSES/RESIDENCES IN ADDITION TO YOURS

HOW MANY METERS? \_\_\_\_\_

List the serial number(s) stamped on the meter(s)

DGDJ0020

DGGC0047

7. Is ~~any~~ water OTHER than Sydney Water's supply being/be used on the premises (eg. Bore Water)?  NO

GIVE DETAILS

Site rainwater is captured

NOTE: FOR ASSISTANCE WITH QUESTIONS 8, 9 AND 10:

- A fully open tap will supply approximately 0.3 litres per second (or 1,000 litres per hour)
- As a guide, the MAXIMUM daily discharge is likely to be 20 percent (%) more than the AVERAGE figure

8. Estimate the MAXIMUM INSTANTANEOUS rate of discharge to the sewer 10 litres per second

9. Estimate the MAXIMUM DAILY discharge volume to the sewer 864,000 litres

10. Estimate the AVERAGE DAILY discharge volume to the sewer 2000 litres

Note: Sydney Water's Trade Waste Policy requires an approved flowmeter to be installed. For more information and publications on flow measurement guidelines, please visit the trade waste section of our website at [www.sydneywater.com.au](http://www.sydneywater.com.au)

11. Is a discharge FLOW METER installed?  YES  NO

12. What is the brand and model of the existing discharge or proposed discharge flow meter?

Brand	Model
ABB	FMS 150-TW

Note: Water meters have been found to be totally unsuitable for measuring the quantity of trade wastewater discharged and are not permitted for this purpose.

14. Are there any discharges to sewer, which can possibly contain rainwater?  NO

YES DETAILS MUST BE COMPLETED IN "APPENDIX F" (REFER TO "APPENDIX F" IN THE INFORMATION PACKAGE)

15. Hours when discharge of trade wastewater to sewer will occur?

Monday	: TO :	Thursday	: TO :	Saturday	: TO :
Tuesday	: TO :	Friday	: TO :	Sunday	: TO :
Wednesday	: TO :	After/Before rainfall events			

16. How many people are (or will be) employed at the premises?

(THIS ALLOWS SYDNEY WATER TO ESTIMATE THE VOLUME OF WATER USED FOR DOMESTIC PURPOSES)

30 People

17. Have you lodged a DEVELOPMENT APPLICATION with your Local Council?

YES

NO

18. Are you (The Applicant) the OWNER ~~MANAGING AGENT~~ for the property?

YES

NO

As the Owner/~~Managing Agent~~, I am aware of this Application and that this business will be (or is being) carried out on the property

SIGNATURE of OWNER <del>MANAGING AGENT</del>	PRINT NAME	DATE
	Luke Parker	3/2/16

Owner

Agency Stamp

Managing Agent

**NOTE**

APPENDICES A to F, plus any other relevant Appendices, must be attached to this Application (REFER TO THE INFORMATION PACKAGE).

Appendix A Site plan

YES

NO

Appendix B Plan of any proposed drainage

YES

NO

see C

Appendix C Nature of processes of the business completed

YES

NO

Appendix D Details of existing and/or proposed pre-treatment equipment

YES

NO

Appendix E Pump specifications

YES

NO

Appendix F Details of any discharges to sewer that may contain rainwater

YES

NO

(Appendix C)

**NATURE OF BUSINESS**

INDUSTRIAL PROCESS (ES)

Receive scrap metal, process it - fragmentation - stockpile, then ship the products to various end users.

Only stored chemicals on site are fuels and lubricants.

Lab analysis of typical trade waste discharge quality attached.

**TABLE 1: SUBSTANCES**

Indicate, in milligrams per litre, the Average Concentration of all substances expected to be present in the trade wastewater discharge. Please also indicate (including the amount) any raw materials, products, chemicals or other goods, stored on site, which may contain the substances listed below.

SUBSTANCE	AVERAGE CONCENTRATION mg/L	TICK IF STORED	AMOUNT STORE Kg
Biochemical Oxygen Demand			
Suspended Solids			
Grease - Total			
Sulphate			
Ammonia			
Nitrogen			
Phosphorus			
Aluminium			
Arsenic			
Barium			
Benzene			
Biocides			
Boron			
Bromine			
Cadmium			
Chlorinated phenolics			
Chlorine			
Chromium			
Cobalt			
Copper			
Cyanide			
Flammable/Explosive Substances			
Fluoride			
Formaldehyde			
Herbicides and defoliant			
Iron			
Lead			

OPEN AREA INFORMATION

1. State why the Open Area CANNOT be roofed:

Operational scrap yard - not economically feasible.  
Area is too large.

2. State why the area is considered to be CONTAMINATED:

(ATTACH LETTER FROM ENVIRONMENT PROTECTION AUTHORITY OR COUNCIL TO VERIFY THIS)

Land is not considered as contaminated, it is not on the contaminated land register.

3.

- What is the length of the area? \_\_\_\_\_ metres
  - What is the width of the area? \_\_\_\_\_ metres
- OR What is the total area? 28,600 square metres

4. What **AUTOMATIC RAINWATER CONTROLS** are proposed?  
(provide details of "first flush" collection and bypass system)

Site is fully concreted.  
All rainwater and potable water that goes to ground is directed to the site retention pond. This water is reused for dust management and process cooling. During large rainfall events we have excess water which we need to discharge.

EPA have removed our licence condition that allowed discharge to local waterway.

### General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.  
LOR = Limit of reporting

^ = This result is computed from individual analyte detections at or above the level of reporting

Ø = ALS is not NATA accredited for these tests.

~ = Indicates an estimated value.
